

A decorative graphic on the left side of the slide consisting of a network of thin, light blue lines. These lines form a complex, branching pattern that resembles a circuit board or a neural network. Some lines end in small circles, while others are open. The overall effect is a modern, technological aesthetic.

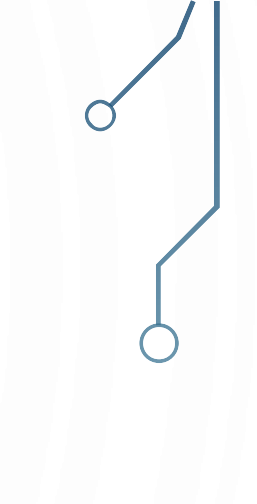

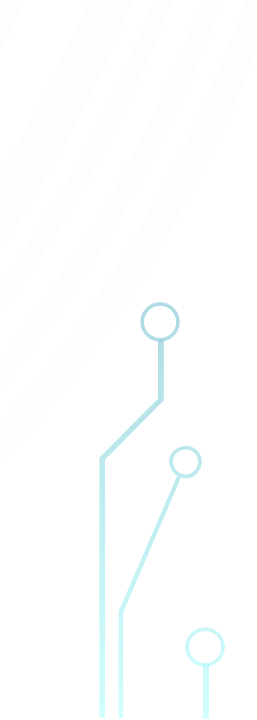

# INTRODUCTION TO **ARTIFICIAL INTELLIGENCE** FOR IT & NON-IT PROFESSIONALS

The background features a series of concentric, light gray circles centered on the page. In the four corners, there are stylized line art elements resembling circuit boards or data paths, with small circles at the end of the lines. The text is centered horizontally and vertically.

# **TRENDS AND TECHNOLOGIES**

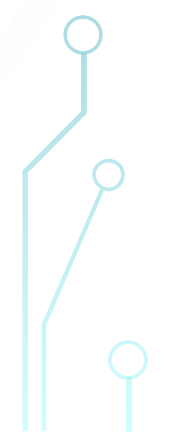

## TRENDS AND TECHNOLOGIES

- AI trends and technologies are made up of software-level models and algorithms.
  - Least visible to the average non-technical person
  - Technologies were the area of AI least approachable to the average businessperson
- 
- 
- 

# TRENDS AND TECHNOLOGIES

- Acceptable in the era of expert systems when everything was done manually.
  - Now, it is important for anyone who will be making business decision involving AI
- 
- 

# TRENDS AND TECHNOLOGIES

## ❑ Good Old-Fashioned AI (grift, 2019)

- As the name of the sub-category implies, static models do not change over time.

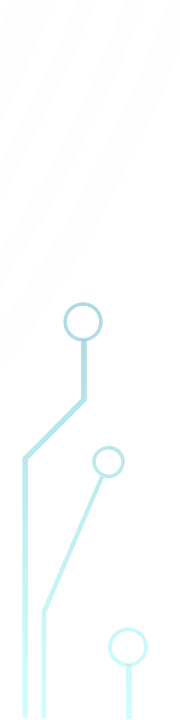

## ❑ Symbolic logic

- Symbolic logic relies on modeling the world as a set of symbols and interactions between the symbols (arithmetic, for instance, is a form of symbolic logic).

# TRENDS AND TECHNOLOGIES

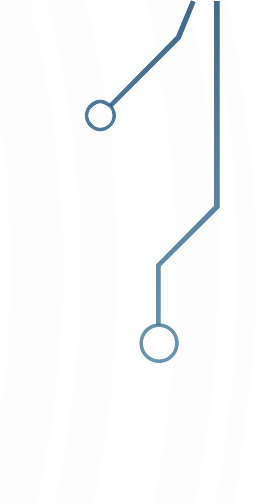

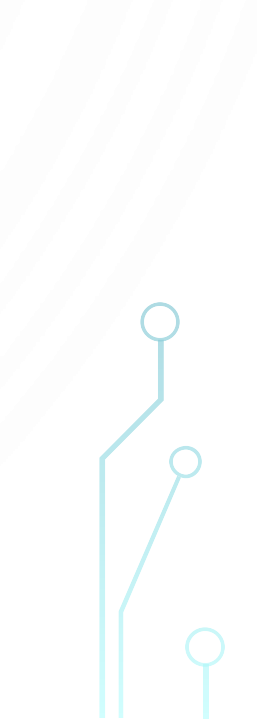

## ❑ Expert systems

- Expert systems (also called knowledge-based systems) codify human knowledge into a computer program
  - Coded with if then rules
- 
- 

# TRENDS AND TECHNOLOGIES

## Decision tree

- A set of comparisons applied to an input to reach a variety of predetermined outcomes
  - Each comparison leads to a branch, which may have more comparisons to be made.
  - This series of branching leads to the “tree” portion of the name.
- 
- 
- 

# TRENDS AND TECHNOLOGIES

- For example

# TRENDS AND TECHNOLOGIES

## ❑ Semantic graphs

- A method of storing information than a model for solving problems or making decisions.
- An important technology for most AI applications dealing with natural language understanding.

# TRENDS AND TECHNOLOGIES

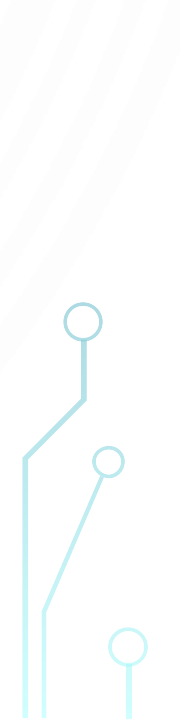

## □ Knowledge Graph

- Famous example of a semantic graph is Knowledge Graph
- Google's effort to document the structure and interrelationship of things in the world

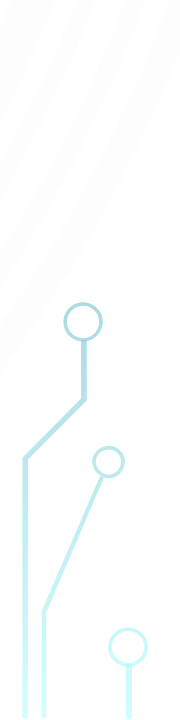

# TRENDS AND TECHNOLOGIES

- When you see results returned directly to a Google search—rather than as a link to another website—often the result has been retrieved from Knowledge Graph.
  - Google's Knowledge Graph is so popular
- 
- 

# TRENDS AND TECHNOLOGIES

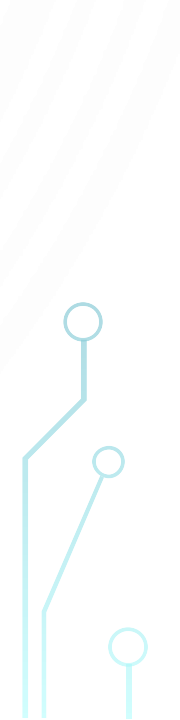

## ❑ Optimization

- Optimization models are often impressive enough to be considered AI, interestingly
  - It can be difficult to categorize static AI because of the lack of clear definitions in the field
- 
- 

# TRENDS AND TECHNOLOGIES

## ❑ MODERN AI TECHNOLOGIES

- Machine Learning
  - ML as an application of AI. Hard coded knowledge vs acquisition of own knowledge.
  - It requires Acquisition, Inference, Updating and refining the KB, heuristics, etc
- 
- 

# TRENDS AND TECHNOLOGIES

## ❑ Internet of thing

- **AI is the brain and IoT is the body**
- **With the application areas such as smart cities, smart grids, smart water managements, smart health, smart supply chain, and smart homes in the Internet of Things (IoT),**
- **Consider the AI as a complementary package of the smart networked objects.**

# TRENDS AND TECHNOLOGIES

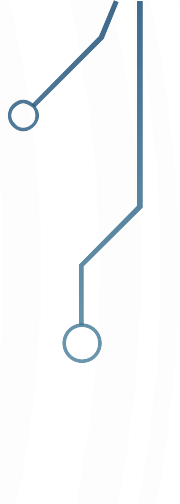

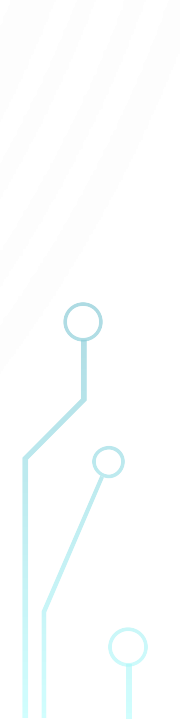

## ❑ Neural networks

- Human brain works with neurons that are connected in a complex manner.
- A kind of programming is being developed that makes machines to work on the neural networks.
- Artificial Neural Network (ANN) programming and developed under the deep learning technology.
- Artificial neural networks first came into application in the year 1989.

# TRENDS AND TECHNOLOGIES

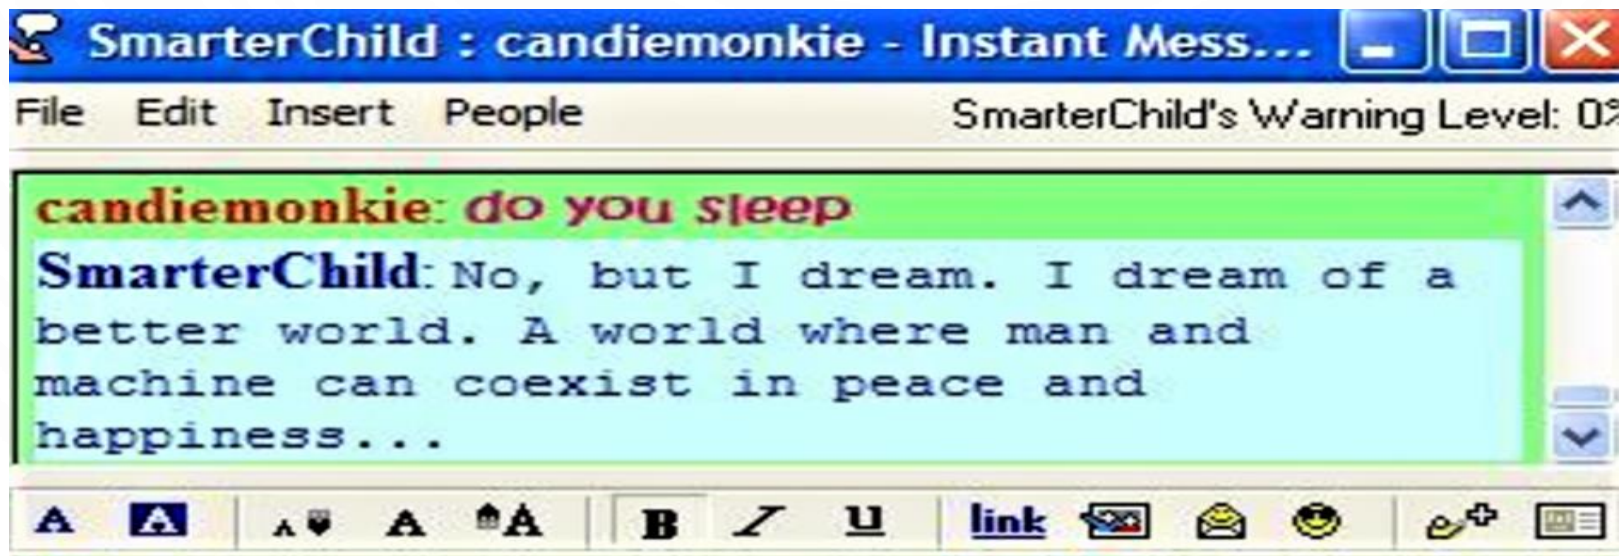

## ❑ Agent Technology

- Software-only equivalent of robots are often referred to as digital agents
  - Programmed to navigate relatively complex sets of tasks and often emulate the behavior of humans.
  - Can operate in several different contexts.
  - Chabot is the most common implementation of the digital
- 
- 
- 

# TRENDS AND TECHNOLOGIES

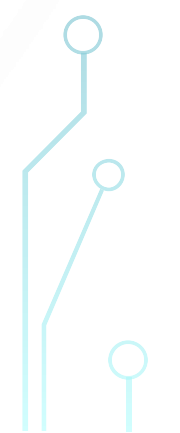

- Smarter Child was one of the more popular ones in the 1990s and 2000s
- It was robot that lived in the buddy list of millions of Americans Online Instant messenger (AIM) users.

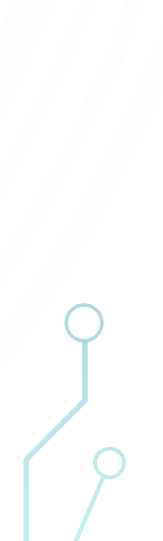

# TRENDS AND TECHNOLOGIES

## Blockchain

- Blockchain is a decentralized data structure with internal consistency
  - It's an enabling technology that resolved the Byzantine generals' problem
  - If the Internet democratized the peer-to-peer exchange of information, then the blockchain has democratized the peer-to-peer exchange of value.
- 
- 

# TRENDS AND TECHNOLOGIES

- Block chain is a peer-to-peer (P2P) distributed ledger technology (DLT) for transparent transaction.
  - The concept and idea were first proposed in [22] on time-stamping of a digital document.
  - The key elements of this definition rest with the keywords: appendable means can add to the ledger.
- 
- 

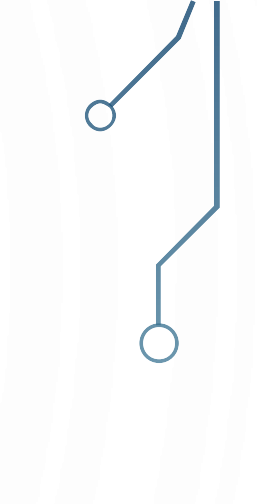

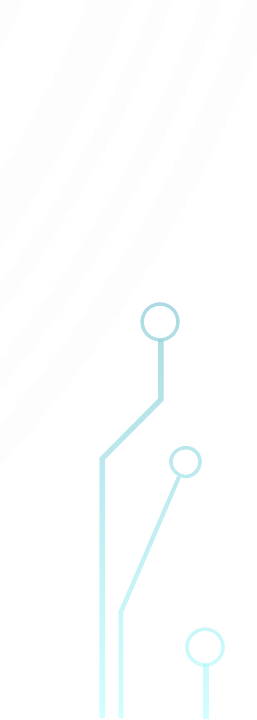

# TRENDS AND TECHNOLOGIES

- **Financial transaction**
- Blockchain technology provides a way for untrusted parties to agree on the state of a database, without using a middleman.
- For example, three untrusted parties like X, Y and Z countries create blockchain network for a financial transaction without using a middleman, like a bank by providing a ledger that nobody administers,
- A blockchain could provide specific financial services — like payments, or securitization — without using a middleman, like a bank.

# TRENDS AND TECHNOLOGIES

## ❑ Deep Learning

- Deep learning is a specific subfield of machine learning
  - How many layers contribute to a model of the data is called the depth of the model.
  - Modern deep learning often involves tens or even hundreds of successive layers of representations
- 
- 
- 

# DEEP LEARNING LAYERS

# TRENDS AND TECHNOLOGIES

## ❑ Augmented reality

- AR as a variation of **virtual reality (VR)**, which completely immerses a user inside a synthetic environment
- AR allows the user to see the real world, with virtual objects superimposed upon or composited with the real world

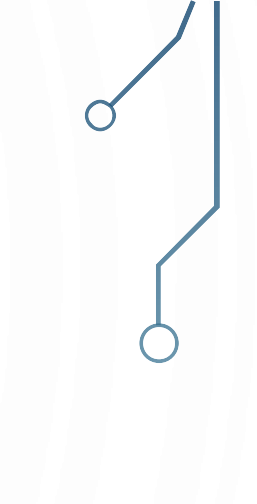

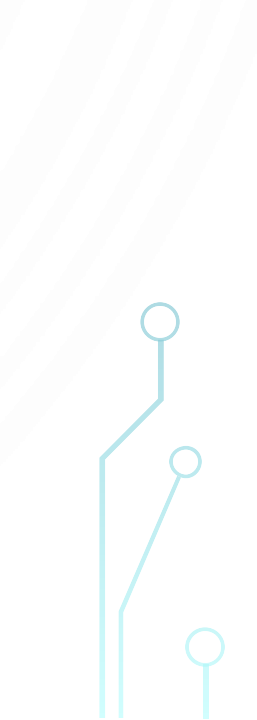

# TRENDS AND TECHNOLOGIES

## ❑ Natural language processing

- how to make use of the copious knowledge that is expressed in natural language
  - how to make use of the copious knowledge that is expressed in natural language
- 
- 
- 

# TRENDS AND TECHNOLOGIES

## □ Robotics process Automation

- AI robots are meant for navigation and exploration of their local environment, with demonstrable intelligence and many times are meant for a task or role,
- Explorer robots,
- Household robots,
- Search and rescue robots etc
- **A robot is a machine, situated in the world that senses, thinks, and acts . . .**

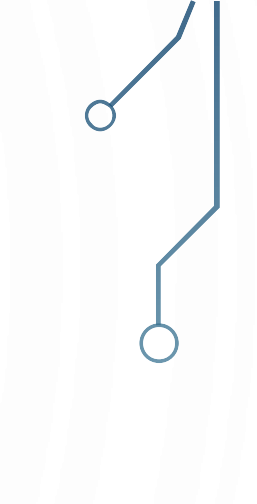

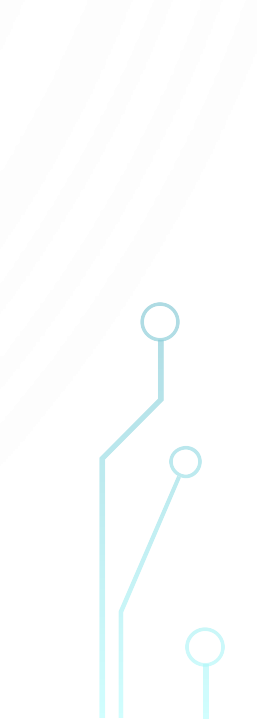

# TRENDS AND TECHNOLOGIES

## ❑ Prediction

- Prediction employs one of the core ideas of AI in that it uses lots of historical data in order to match a new piece of data to an identified group
- Data in order to match a new piece of data to an identified group
- What do knowledge calls a ‘recommendation’ is a prediction they make in order to sell you more stuff.

# TRENDS AND TECHNOLOGIES

- Some decisions can be described as predictions—if you apply for a loan that is assessed by a machine, then the AI will try and predict whether you will default on the loan or not.
  - It will try and match your profile (age, salary, regular spending, other loans, etc.) with other customers that have similar profiles.
  - If those other matching customers generally default on their loans then you will likely be refused the credit line.
- 
- 
- 

# AI TOOLS/LIBRARIES

- Uizard
  - Microsoft Azure
  - BigML
  - Orange
  - MATLAB
  - A great library ecosystem: python
- 
-
